

Purpose:

To test, validate and verify usability of the web application. Summarize findings and conclude the test.

1. Project Summary

Testing was conducted on the Parabank web application to validate core banking functionalities such as login, account management, Loan request and fund transfer.

2. Test Execution Summary

- Total Test Cases: 42 - 29 (Manual) 12 (API)
 - Passed: 37
 - Failed: 5
 - Blocked: 0
-

3. Defect Summary

- Total Bugs Found: 5
- High Severity: 4
- Medium Severity: 1
- Low Severity: 0

4. Key Findings

- Some validation messages are missing
- Incorrect behavior in bill payment and loan transfer edge cases
- Minor UI inconsistencies

5. Risks / Issues

- Limited test data
 - Inconsistency in input validation behavior
 - Some features not fully testable
-

6. Conclusion

Overall, the application is functional for basic use, but certain severe issues need to be fixed to improve reliability and user experience.
